MaxiMiser

The **Jaymor MaxiMiser** provides a powerful networks system while still representing excellent value for money.

The **MaxiMiser** features a membrane style operator panel that provides excellent longevity in the tough sawmill environment.

The **MaxiMiser** can operate as a fully self contained unit or be integrated with hand controls and wobblesticks depending on the application.

All size buttons feature an individual display, and there is a continuous live display of the current machine position.

The **MaxiMiser** can store 8 sets of 16 sizes giving 128 sizes in total.

All setup aspects of the networks are carried out on the unit via the operator push buttons. This means no need to plug in a computer or other device in for setup or system maintenance.

The **MaxiMiser** is so versatile that it has been used on many different types of machine including:

- Single and Twin axis Resaws
- Twin axis Edgers
- Log Carriages
- Carriage/Slabber combinations

The **MaxiMiser** can control solenoid and proportional hydraulic valves, servovalves, vector drives and even proportional air control. This means that a unit can be installed to control existing hydraulics to ease the cost of upgrades.

Call **Jaymor** to find out more about how a **MaxiMiser** could suit your application.
