MiniMiser

The **Jaymor MiniMiser** series provides an entry level networks system that is low in price but rich in features.

Firstly the **MiniMiser** features a membrane style operator panel that provides excellent longevity in the tough sawmill environment.

Next is the simplicity of use, with quick, accurate motion control purposely tailored to sawmilling machinery.

With the current size programmed into each button always displayed and a continuous live display of the current machine position what could be simpler?

The **MiniMiser** can store 8 sets of 8 sizes giving 64 sizes in total.

All setup aspects of the networks are carried out on the unit via the operator push buttons. This means no need to plug a computer or other device in for setup or system maintenance.

The **MiniMiser** is so versatile that it has been used on many different types of machine including:

- Breastbenches
- Single and Twin axis Resaws
- Twin axis Edgers
- Simple Log Carriages
- Custom Slabber controls
- To create custom measuring systems

The **MiniMiser** can control solenoid and proportional hydraulic valves, servovalves, vector drives and even proportional air control. This means that a unit can be installed to control existing hydraulics to ease the cost of upgrades.

Call **Jaymor** to find out more about how a **MiniMiser** could suit your application.
